Project 8, Report: COP3813/002

SET UP: BOOTSTRAP, CHROME, NOTE++, BOOTSTRAP

At this point I have become quite proficient with these tools. After all the projects Note++ remains my preferred text editor, Chrome the default browser and Bootstrap the easiest way to get visually stunning effects on my websites.

DESCRIPTION: VISUALLY PLEASANT PORTAL

This project portfolio was done using the "creative" Bootstrap template which comes with JavaScript and jQuery functionality for good looking animations and style. The site offers a navigation menu that leads you to a brief description of each project and to a section of the page where a clickable thumbnail will link you with each individual site.

Challenges: Choosing an appropriate style

After all the struggles I had to endure from past assignments I am happy to report that I can easily create a visually appealing site in my sleep. If I knew how to do this back when I was developing project two I could have saved myself hours of frustration. In any case the only challenge I faced was deciding what style would look good but also what style could simply be updated to incorporate more projects in the future.

TESTING BROWSERS: CHROME, FIREFOX, EDGE

The page works on all browsers. The site is also responsive and fully operational on smaller devices.

CONCLUSION: FUN, IMPORTANT, USEFUL AND CHALLENGING

This portfolio will be useful to show anyone interested, the progression in skills and technologies learned regarding web development.
